

Roles and Responsibilities

The cab booking platform involves three primary roles: User (Rider), Driver, and Admin. Riders can create an account, log in securely, search for available cabs, compare vehicle types, book rides, track the driver's arrival, monitor the journey in real time, review previous trips, and download payment receipts whenever required. Drivers log in to receive ride requests, accept or decline bookings, update ride progress from pickup to completion, manage availability, and view ride history along with total earnings. Administrators oversee the complete system by managing user and driver accounts, verifying bookings, monitoring payments, maintaining vehicle categories, handling customer issues, and generating reports and analytics to improve overall performance and service quality.

User Flow

The workflow begins when a rider registers or signs in to the application. After successful authentication, the rider selects a preferred cab category, enters pickup and destination locations, reviews the estimated fare, and confirms the booking. The system identifies a nearby available driver and sends the request. Once accepted, both the rider and driver receive ride details, and live location tracking starts. Throughout the journey, the driver updates the ride status until the destination is reached. After the trip, the payment is processed, a digital receipt is generated, and the booking is stored in the ride history for future reference.

Features

The application offers secure login and registration for riders and drivers, supports different vehicle categories such as Mini, Sedan, and SUV, provides real-time ride tracking, enables scheduled bookings, and allows users to cancel or reschedule trips when necessary. It also maintains complete ride history with downloadable receipts, supports multiple payment methods, displays fare estimates before booking, sends booking notifications, and provides administrative tools for user management, booking supervision, payment monitoring, analytics, and vehicle category management, ensuring a reliable and user-friendly cab booking experience.
